

INCREASED EFFICIENCY AND QUALITY THROUGH TRAINING.

Training

Advanced training course with FANUC painting robots

Training course objectives

This three-day course targets the operator as well as the installation foreman. Extended training in the areas of robot painting systems and paint application is offered in this course.

During the course the participant will learn with active participation

- Apply the possibilities provided by the control to his paint application
- Create complex painting programs with the Teach-Pendant-Editor (TPE) and WinTPE-Software, both online and offline
- Remedy minor malfunctions fast and efficient

Topics of the course

- Occupational safety when working with paint
- Different motions in manual and automatic operation
- Tool adjusting and measuring
- Creating of painting programs
- Online and offline programming
- Program structure in PaintTool
- Adjusting of paint
- Adjusting and calibrating of application parameters
- Integration of in- and outlets
- Loading and storing of programs and system variables
- Error messages and condition descriptions
- Data back up

Optional training day

Subsequent to the training we offer the possibility to book an optional training day – with your own work pieces – in our painting installation.

Target group

This training is to be recommended for customers that have prior knowledge in programming and would like to

develop optimized programs. The order of events and the topics of the training can vary according to the level of knowledge of the participants. This course consists of a theoretical part and practical training.

Duration of course: 3 days

Number of participants: 3 - 5 people
