

INCREASED EFFICIENCY AND QUALITY THROUGH TRAINING.

Training

FANUC Painting robots and painting technique

Training course objectives

This four-day course targets the operator, installation foreman, and process developer and project leader. Extended training in the areas of robot painting systems and paint applications is offered in this course.

During the course the participant will learn with active participation:

- To develop and optimize painting programs independently
- The set-up of Brush charts, gauging and to perform the rinsing process
- The co-operation between painting robots and application techniques

Topics of the course

- Occupational safety when working with paint
- Set-up and functionality of FANUC painting robots
- 1K-, 2K- and 3K- paint supply
- Adjusting of tools and user coordinates
- Different motions in manual and automatic operation
- Creating of dynamic spraying patterns – procedure and influence
- Painting of work pieces with prior defined brush-charts, gauging and performance of the rinsing process
- Creating of painting programs
- On- and offline programming
- Error messages and condition descriptions – cause and action
- Complete backup

Optional training day

Subsequent to the training we offer the possibility to book an optional training day – with your own work pieces – in our painting installation.

Target group

This training is to be recommended for customers who supervise robots as well as painting installations and are in charge for uninterrupted operation.

This training does not require prior knowledge and is suitable for beginners.

The topics of the course are an overview and can be adjusted depending on the experience of the participants.

Duration of course: 4 days

Number of participants: 3 - 5 people
