

Filling Station

Continuous electrostatic painting of waterbased paint from 1000l container

- Paint material is delivered in the container (permanent grounded).
- Level control of buffer and work tank with min./max.
- Buffer tank either under high tension or grounded.
- Buffer tank will be filled from supply tank (grounded). Filling station between buffer tank und work tank must be in disconnected position and buffer tank will be grounded by ground switch.
- To fill work tank, filling station between supply tank and buffer tank must be disconnected. Buffer tank will be under high tension.

PERFECT FINISH – PAINTED BY THE SPECIALIST.
