Agitation Station
for 30 litre Hobbock

Functional Description
The agitation station is mounted on an aluminium frame as a compact unit and is designed for the use in painting installations. All parts that come in contact with the medium are made of stainless steel. A constant speed is reached through the compressed air motor with gear box, which prevents the development of foam.

Features
- Constant speed prevents development of foam
- Single earthing of components acc. to DIN EN 50310
- User friendly mounted on aluminium frame
## Technical Data

### Agitation station for 30 litre hobbock

## Essential Components

- Lifting unit 500 mm stroke with 3-way control valve up/stop/down
- Container lid with rim (Ø 450) made of stainless steel for Euro hobbocks
- Pneumatic gear agitator 0,5 kW, with possibility to throttle and blade agitator made of stainless steel
- Compressed air connection with isolating ball valve
- Earthing bar and earthing material
- Mounting stockade of aluminium profile and grate
- Collecting pan constructed as dripping pan
