

PERFECT FINISH – PAINTED BY THE SPECIALIST.

Automatic Coating Machines

Round table machines

Circular machines offer a reasonably-priced solution to achieve automatic coating. As small machines, they can also be used as a mobile unit to work at existing spraying booth.

Circular machines can be integrated into processing lines as coating islands for partial coating of workpieces that are to be loaded automatically.

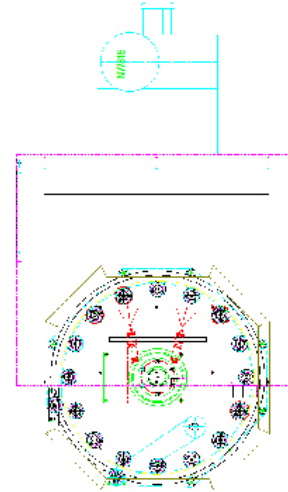

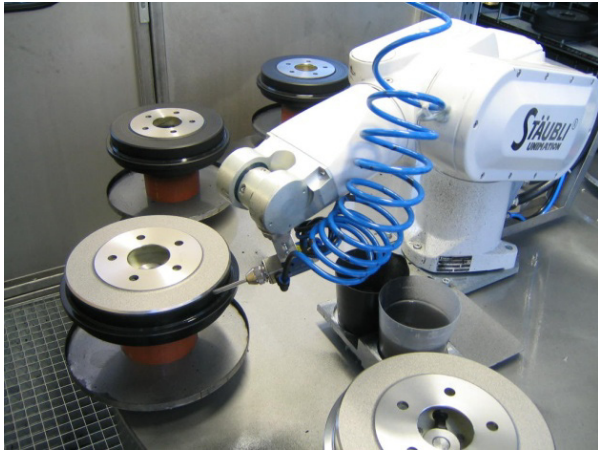

Features

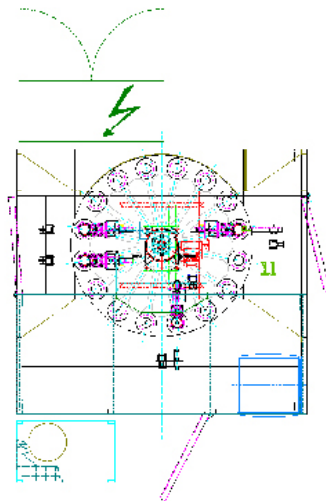

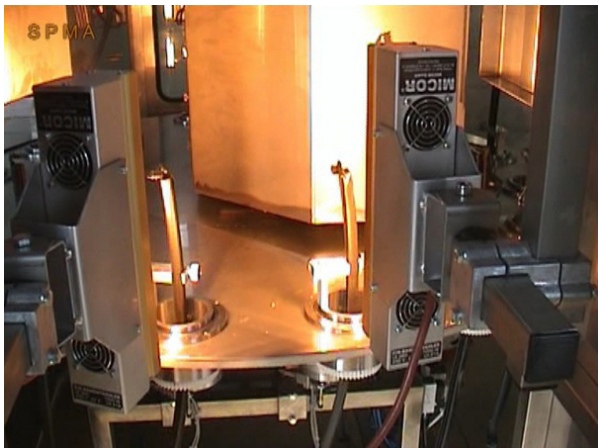

- All-round coating of parts on spindles
- Variable spindle distance, according to the size of parts
- Solid designed turntables and spindles for heavy parts
- Exact spindle position for precise coating
- Compact size with dry or wet exhaust system
- User-friendly controls and programming
- Repeatable coating quality
- Integration as coating cell into production line
